Usability Testing Script Results

Scenario: User is busy studying and is hungry.

Tasks: Pick and food type and restaurant choice. Create an order from the restaurant. Choose form of delivery for your order.

Things to fix:

1. Add an option for how the user wants to pay and a way to edit that choice
2. User 2 did not like the ability to share to social media. Maybe add a way to turn this feature off.

Things to keep:

1. The user liked that a lot of food options showed up with the type of food chosen. Especially for if you were in a new area.
2. The user liked that the app saved previous orders for quick and easy reordering.
